Getting Started with the NI PCI-1410

The NI PCI-1410 (NI 1410) is a monochrome image acquisition device for PCI. This document describes how to install and configure the necessary hardware and software components to begin using the NI 1410.

What You Need to Get Started

You need the following items to set up and use the NI 1410:

❑ NI 1410 image acquisition device
❑ IMAQ BNC-1 shielded, 75 Ω BNC cable for VIDEO0, included with the NI 1410
❑ Video camera or other video source
❑ Computer running Microsoft Windows Vista/XP/2000 with at least one available PCI slot

Note Visit ni.com/info and enter rdvisionvista for more information about National Instruments image acquisition device compatibility with Windows Vista.
❑ NI Vision Acquisition Software 8.0 or later, which includes the NI-IMAQ driver software
❑ Optional software for developing applications:
  – NI Vision Builder for Automated Inspection
  – NI Vision Development Module
  – LabVIEW
  – LabWindows™/CVI™
  – Microsoft Visual Basic

Optional Equipment

National Instruments offers the IMAQ-A6822 BNC connector block and cable for trigger and additional camera support for the NI 1410. Refer to the National Instruments catalog, visit ni.com, or call the National Instruments office nearest you for more specific information about the IMAQ-A6822 BNC connector block and cable.

Related Documentation

The following documents contain additional information that you may find helpful:

• *NI PCI-1410 User Manual*—Contains information about programming options, hardware functionality, and signal connections.

• *NI Vision Acquisition Software Release Notes*—Contains information about new functionality, minimum system requirements, and installation instructions for the NI-IMAQ driver software.

• *NI-IMAQ Help*—Contains fundamental programming concepts for the NI-IMAQ driver software and terminology for using NI image acquisition devices.
Safety Information

Caution  The following paragraphs contain important safety information you must follow when installing and operating the device.

Do not operate the device in a manner not specified in the documentation. Misuse of the device may result in a hazard and may compromise the safety protection built into the device. If the device is damaged, turn it off and do not use it until service-trained personnel can check its safety. If necessary, return the device to National Instruments for repair.

Keep away from live circuits. Do not remove equipment covers or shields unless you are trained to do so. If signal wires are connected to the device, hazardous voltages can exist even when the equipment is turned off. To avoid a shock hazard, do not perform procedures involving cover or shield removal unless you are qualified to do so. Disconnect all field power prior to removing covers or shields.

If the device is rated for use with hazardous voltages (>30 VRms, 42.4 Vpk, or 60 Vdc), it may require a safety earth-ground connection wire. Refer to the device specifications for maximum voltage ratings.

Because of the danger of introducing additional hazards, do not install unauthorized parts or modify the device. Use the device only with the chassis, modules, accessories, and cables specified in the installation instructions. All covers and filler panels must be installed while operating the device.

Do not operate the device in an explosive atmosphere or where flammable gases or fumes may be present. Operate the device only at or below the pollution degree stated in the specifications. Pollution consists of any foreign matter—solid, liquid, or gas—that may reduce dielectric strength or surface resistivity. The following is a description of pollution degrees.

- Pollution Degree 1—No pollution or only dry, nonconductive pollution occurs. The pollution has no effect.
- Pollution Degree 2—Normally only nonconductive pollution occurs. Occasionally, nonconductive pollution becomes conductive because of condensation.
- Pollution Degree 3—Conductive pollution or dry, nonconductive pollution occurs. Nonconductive pollution becomes conductive because of condensation.

Clean the device and accessories by brushing off light dust with a soft, nonmetallic brush. Remove other contaminants with a stiff, nonmetallic brush. The unit must be completely dry and free from contaminants before returning it to service.

You must insulate signal connections for the maximum voltage for which the device is rated. Do not exceed the maximum ratings for the device. Remove power from signal lines before connection to or disconnection from the device.

Caution  National Instruments measurement products may be classified as either Measurement Category I or II. Operate products at or below the Measurement Category level specified in the hardware specifications.

Measurement Category1: Measurement circuits are subjected to working voltages2 and transient stresses (overvoltage) from the circuit to which they are connected during measurement or test. Measurement Category establishes standardized impulse withstand voltage levels that commonly occur

---

1 Measurement Categories as defined in electrical safety standard IEC 61010-1.
2 Working voltage is the highest rms value of an AC or DC voltage that can occur across any particular insulation.
in electrical distribution systems. The following is a description of Measurement (Installation\textsuperscript{1})
Categories:

- Measurement Category I is for measurements performed on circuits not directly connected to the electrical distribution system referred to as MAINS\textsuperscript{2} voltage. This category is for measurements of voltages from specially protected secondary circuits. Such voltage measurements include signal levels, special equipment, limited-energy parts of equipment, circuits powered by regulated low-voltage sources, and electronics.

- Measurement Category II is for measurements performed on circuits directly connected to the electrical distribution system. This category refers to local-level electrical distribution, such as that provided by a standard wall outlet (e.g., 115 V for U.S. or 230 V for Europe). Examples of Measurement Category II are measurements performed on household appliances, portable tools, and similar products.

- Measurement Category III is for measurements performed in the building installation at the distribution level. This category refers to measurements on hard-wired equipment such as equipment in fixed installations, distribution boards, and circuit breakers. Other examples are wiring, including cables, bus-bars, junction boxes, switches, socket-outlets in the fixed installation, and stationary motors with permanent connections to fixed installations.

### Unpacking

The NI 1410 ships in an antistatic package to prevent electrostatic discharge from damaging device components. To avoid such damage in handling your device, take the following precautions:

1. Ground yourself using a grounding strap or by touching a grounded object, such as the computer chassis.

2. Touch the antistatic package to a metal part of the computer chassis before removing the device from the package.

\textbf{Caution} Never touch the exposed pins of connectors.

3. Remove the device from the package and inspect it for loose components or any other signs of damage. Notify National Instruments if the device appears damaged in any way. Do not install a damaged device in the computer.

Store the NI 1410 in the antistatic package when not in use.

### Installation

The following instructions are for general installation. Refer to the documentation provided by your computer manufacturer for specific instructions and warnings. Refer to the \textit{Specifications} section for typical power requirements for the NI 1410.

1. Install the NI Vision Acquisition Software before installing the NI 1410. Refer to the \textit{NI Vision Acquisition Software Release Notes} for specific installation instructions.

2. Power off and unplug the computer.

3. On the NI 1410, verify that the W1 jumper is in place. The NI 1410 ships with this jumper intact.

---

\textsuperscript{1} Measurement Category is also referred to as Installation Category.

\textsuperscript{2} MAINS is defined as the (hazardous live) electrical supply system to which equipment is designed to be connected for the purpose of powering the equipment. Suitably rated measuring circuits may be connected to the MAINS for measuring purposes.
Caution  To protect yourself and the computer from electrical hazards, the computer must remain unplugged until the installation is complete.

4. Remove the computer cover to expose the expansion slots.
5. Touch a metal part of the computer to discharge any static electricity that might be on your clothes or body. Static electricity can damage the device.
6. Choose an unused PCI slot, and remove the corresponding expansion slot cover on the back panel of the computer.
7. Remove the device from the antistatic package and gently rock the device into the slot. The connection may be tight, but do not force the device into place.

Note  Check that the bracket of your device aligns up with the hole in the back panel rail of the computer chassis.

8. Secure the device mounting bracket to the back panel rail of the computer.
9. Replace the computer cover.
10. Connect the BNC cable included with the NI 1410 to the camera. Refer to the camera manufacturer documentation for specific instructions about how to connect the cable to the camera.
11. Connect the BNC cable to the VIDEO0 connector on the NI 1410 front panel.
12. Plug in and power on the computer.

The NI 1410 is now installed and the camera is connected.

Configuring the NI 1410

After you have installed the NI 1410 and powered on the computer, the computer will recognize the device and assign resources to it. Use Measurement & Automation Explorer (MAX), the National Instruments configuration utility, to configure the NI 1410 for acquisition. Refer to the Measurement & Automation Explorer Help for NI-IMAQ for additional information about configuring the NI 1410.

Note  Before configuring the device in MAX, ensure that the NI-IMAQ driver software is installed.

Specifications

The following specifications apply to the NI PCI-1410 image acquisition device. These specifications are typical at 25 °C, unless otherwise stated.

Supported Video Formats

- RS-170/NTSC .......................................................... 30 frames/s (Interlaced mode: 60 fields/s)
- CCIR/PAL ............................................................. 25 frames/s (Interlaced mode: 50 fields/s)
- VGA ................................................................. 60 Hz, 640 × 480 resolution

Note  The NI 1410 also supports other nonstandard video formats whose internal pixel clock frequencies are between 2–40 MHz.

Video Input

- Channels ............................................................... 4 monochrome
- Input impedance .................................................. 75 Ω ± 1%
- VIDEO0 .............................................................. RSE (BNC or VHDCI) or DIFF (VHDCI)
- VIDEO<3..1> .......................................................... RSE or DIFF (VHDCI)
Frequency response.................................30 MHz (–3 dB) typ
Digital antichrominance filter.........................Programmable (disabled, 3.58 MHz notch filter, or 4.43 MHz notch filter)
Filter characteristics......................................Attenuation at notch frequency >30 dB
Input range (black to white).........................700 mV (calibrated) 50 mV to 1.40 V full scale
Accuracy...............................................±1.5% of reading
Temperature drift.......................................<250 ppm/°C

A/D Conversion
Gray levels .............................................1,024 (10-bit)
Differential nonlinearity..............................±1 LSB max
RMS noise..............................................<0.5 LSB rms
Signal-to-noise ratio..................................56 dB typ
Sampling rate ..........................................2 MHz to 40 MHz, externally clocked
Pixel aspect ratio.....................................Programmable ±5% of nominal

Memory
Onboard memory......................................16 MB synchronous dynamic RAM

Internal Pixel Clock
Frequencies range ..................................2 MHz to 40 MHz
Pixel ratio for standard video sources..........±5%

External Connections
Trigger input
  Voltage range ......................................0 V to 5 V (TTL)
  Input high voltage.............................2.0 V
  Input low voltage..............................0.8 V
  Polarity............................................Programmable, active-high or active-low

Trigger output
  Voltage range ......................................0 V to 5 V (TTL)
  Output high voltage..........................2.4 V at 15 mA source
  Output low voltage............................0.55 V at 8 mA sink
  Polarity............................................Programmable, active-high or active-low

Power-on state.......................................Input (high-impedance) 10 K Ω pull-up to 5 V
**Power Requirements**

Voltage .................................................................+5 V (1.5 A)
+12 V (100 mA)
–12 V (100 mA)

**Physical**

Dimensions .......................................................10.7 × 17.5 cm (4.2 × 6.9 in.)
Weight .................................................................0.127 kg (0.28 lb)

**Environment**

The NI 1410 is intended for indoor use only.

Operating temperature ......................................0 °C to 55 °C
Storage temperature .............................................–20 °C to 70 °C
Pollution Degree ......................................................2
Relative humidity .................................................10% to 90%, noncondensing

**Note**  
Random vibration profiles were developed in accordance with MIL-T-28800E and MIL-STD-810E Method 514. Test levels exceed those recommended in MIL-STD-810E for Category I (Basic Transportation, Figures 514.4-1 through 514.4-3).
Approved at altitudes up to 2,000 m.

**Safety**

This product is designed to meet the requirements of the following standards of safety for electrical equipment for measurement, control, and laboratory use:

- IEC 61010-1, EN 61010-1
- UL 61010-1, CSA 61010-1

**Note**  
For UL and other safety certifications, refer to the product label or visit ni.com/certification, search by model number or product line, and click the appropriate link in the Certification column.

**Electromagnetic Compatibility**

This product is designed to meet the requirements of the following standards of EMC for electrical equipment for measurement, control, and laboratory use:

- EN 61326 EMC requirements; Minimum Immunity
- EN 55011 Emissions; Group 1, Class A
- CE, C-Tick, ICES, and FCC Part 15 Emissions; Class A

**Note**  
For EMC compliance, operate this device according to product documentation.

**CE Compliance**

This product meets the essential requirements of applicable European Directives, as amended for CE marking, as follows:

- 73/23/EEC; Low-Voltage Directive (safety)
- 89/336/EEC; Electromagnetic Compatibility Directive (EMC)
Note  Refer to the Declaration of Conformity (DoC) for this product for any additional regulatory compliance information. To obtain the DoC for this product, visit ni.com/certification, search by model number or product line, and click the appropriate link in the Certification column.

Waste Electrical and Electronic Equipment (WEEE)

EU Customers  At the end of their life cycle, all products must be sent to a WEEE recycling center. For more information about WEEE recycling centers and National Instruments WEEE initiatives, visit ni.com/environment/weee.htm.

Where to Go for Support

The National Instruments Web site is your complete resource for technical support. At ni.com/support you have access to everything from troubleshooting and application development self-help resources to email and phone assistance from NI Application Engineers.

A Declaration of Conformity (DoC) is our claim of compliance with the Council of the European Communities using the manufacturer’s declaration of conformity. This system affords the user protection for electronic compatibility (EMC) and product safety. You can obtain the DoC for your product by visiting ni.com/certification. If your product supports calibration, you can obtain the calibration certificate for your product at ni.com/calibration.

National Instruments corporate headquarters is located at 11500 North Mopac Expressway, Austin, Texas, 78759-3504. National Instruments also has offices located around the world to help address your support needs. For telephone support in the United States, create your service request at ni.com/support and follow the calling instructions or dial 512 795 8248. For telephone support outside the United States, contact your local branch office:
